

The Pulsafeeder ECA is the simplest and most economical stroke controller. It is a robust signal follower with high accuracy that allows for multiple types and variable range of analog signals. This allows for system and communication compatibility and versatility. The ECA offers independent isolation of the input and output signals; effectively eliminating drift and noise problems. The ECA gives you simple 1-button calibration. Merely supply a signal level to the unit, press a button, supply the high signal, press a button and the calibration is easy.

Key Features

- Standard signal loss protection
- By setting a jumper, it will either freeze at the current position or drive back to zero
- Fully programmable 0-25mA output or 0 to 4.095 VDC
- Nema 4 or NEMA 7 enclosure for hazardous or explosive environments (without adjustment knob)
- Measures variations in input signal as small as 0.02mA
- Operates within +/- 0.1% stroke adjustment steps
- Optical encoder digitally resolves stroke position for optimal accuracy
- For Pulsar, Pulsar Hypo2pump, Shadow, and Shadow Hypo2pump Pumps
- UL and ULC certified, IP66, CE, CENELEC

pulsafeeder.com

Operating Benefits

- Can measure variations in the input signal as small as 0.02mA, and translate that into 0.1% stroke adjustment accuracy.
- Simple one button calibration. Making it simple and easy to setup.
- Robust, provides long service life
- Independent isolation of both the input and output signal channels help to prevent signal drift problems

Aftermarket & Accessory Offerings

- KOPkit[®]
- Cal Columns
- Strainer
- Pressure Relief Valves
- Back Pressure Valves
- Pulsation Dampeners
- Gauges

Specifications and Model Selection

Engineering Data

Power Input Options:	Single Phase, 115 or 220VAC			
Stroke Length Control:	0-100% control range			
Stroke Adjustment				
Response:	0% per second			
Analog Input:	0 to 25.5 mA (4-20 mA factory default)			
	160 ohms Input Impedance			
	2mA or 0.4 VDC Minimum span			
	500V isolation from all other inputs,			
	outputs and ground			
	Non-powered solid-state contacts			
	-user configurable			
Analog Output:	0 to 25.5mA (4-20mA factory default)			
	700 ohms maximum load			
	2mA or 0.4VDC minimum span			
	500V isolation from all out inputs.			
	outputs and ground optically isolated			
Status Input:	Motor is on/off. Optically isolated dry			
	contact input. Open contact indicates			
	motor is off. Controller will then suspend			
	all stroke control action. Motor starter
